CHART IV

This chart illustrates the flow of students if the two phases at are consolidated into a ten-week package.

25X1

Outside of the great single disadvantage, this type of scheduling offers some advantages.

The big disadvantage is the ten-week package without a break. Recommendation. If the training altogether will take ten weeks, then put a break for the students at the end of the fifth week. In such a case, a flow chart would look like a modified CHART II.

One advantage of this type of scheduling is that a completely separate and distinct BIC/SUP can be offered regularly. As the dotted red lines indicate, other runnings of the BIC/SUP can be offered; but the big advantage is in using one running of the BIC(CS) for DD/A personnel alone. The backlog could better be reduced in this way.

Another advantage is the extreme flexibility offered in the scheduling of almost every course in Advanced Training, as indicated by the dotted pencil lines.
